adapt

Integrated automation for efficiency

Adapt's Job Order intake functionality allows integration between a third party VMS and Adapt so that jobs released to an agency are automatically picked up and pulled into Adapt.

Job Order Intake

The automation of this process represents significant time and cost savings for the ever busy recruiting firm. Recruiters will be able to focus on presenting the best and most qualified candidates to fulfil clients' objectives.

Not only will Adapt pull jobs from a VMS product but candidates who have been submitted against vacancies from the Adapt side will automatically be submitted into the ATS product without manual retyping, eliminating error.
